

Removing Managed Version of WebRoot

Some MSPs used the managed version of WebRoot on client computers. Uninstalling it can be a hassle as it is meant to be.

Go to `C:\ProgramData\WRDATA` and delete the folder.

You will need to show hidden files.

Now uninstall from Add/Remove Programs

or

Run a command line instance as Administrator.

```
"C:\Program Files\Webroot\WRSa.exe" -uninstall
```
