Mobile Printing - Quik Start Guide

Printing methods

- **Wi-Fi printing:**
  Users can immediately send a job to a printer using the wireless network.
  - Printing from an Android tablet or Phone
  - Printing from Chromebook
  - Printing from iOS (iPad or iPhone)
  - check the status of a Wi-Fi job

- **Printing via email:**
  Users can attach a file to an email, and then send the email to a printer.
  - Sending a print job via email

- **Printing via Cloud Service:**No need to find and install print drivers, simply upload your documents to PrintMe cloud and print anywhere on internet-enabled printers without software, cables or complex set-up.
  - Cloud Printing

- **Mobile Printing printer driver:**
  Automatically discovers nearby Mobile Printing-enabled printers on the network and allows end users to print to them from any application on a laptop or computer with a wireless or wired network connection using standard File > Print workflows.
  - Printing from Windows

Secure print release

Administrators can configure a secure queue, so that users can print jobs on demand. Jobs are held in the secure queue until the user releases the job to a printer. This ensures that sensitive documents are not left in the printer tray unattended. Administrators can also set the numbers of days documents remain in the secure queue.

Authenticated userssend a file to an email address specified by the administrator and then receive an email with a link to the Secure Release webpage. From the webpage, they release the file to the printer. Network credentials are required. Alternatively, they can send the file to the secure queue by Wi-Fi.

Secure print release (authenticated users)
