Mobile apps

To be able to use the mobile apps with your Web File Share installation you need to enable the API.

A SSL enabled web server is required. (Your Web File Share URL needs to start with "https://" and not "http://").
(For testing only, you can temporarily enable the API via "http://". See "Testing without SSL")

Please follow these steps:

1. Login to the Web File Share installation as superuser.
2. Open the control panel.
3. Select "API" from the menu (under "Security").
4. Select the "Enable API" checkbox.
5. Click "Save Changes".
