

Sync folders with iOS (iPad or iPhone)

<https://www.youtube.com/embed/fh78oIJ79ZE>

Overview

You can synchronize your Web File Share folders with your Apple device and access them from anywhere on the go from your favorite mobile device. It can be a one way synchronization where the updated files from the network show up on your handset or two-way communication where the users can modify the files at their convenience from their device and the changes get reflected on the network files.

There are no file size limits or data caps. If the internet connection breaks in between then the file will resume downloading from the point where it was last left.

Step 1

Right click on the folder that you want to sync with your Apple device. Select "Share" from the contextual menu and then click on "BitTorrent sync".

Step 2

Click on "Connect mobile device" to generate a special bar code called "QR code". Scan this QR code with your mobile device to connect sync folders.

To sync a folder on your iPad from your company network, follow the steps below:

- 1) From the Apple iPhone or iPad device, download the free BitTorrent Sync software from the app store. Open the BitTorrent Sync Software.
- 2) Click on "Add Sync Folder".
- 3) Hit the "Scan QR" button.
- 4) Hold the apple device up to your monitor and the BitTorrent Sync will automatically capture the information from the QR code.
- 5) Create a new folder (For example, Marketing) on your device for the documents to sync to and select "Done".
- 6) If you wish your iPad device automatically sync, select the folder that you created (For example, Marketing) and set the "Auto Sync" option. If your internet connection is running, the files will start syncing to your device and you can access them on the go.
